

Block spam, not legitimate emails

No anti-spam vendor claims 100% accurate spam filtering – which is precisely why Policy Patrol Spam Filter includes an email quarantine report that allows users to quickly scan through the list of newly quarantined spam messages in Outlook and deliver emails and white list addresses. Instead of just placing all spam in the junk mail folder that users forget to check, the user is now reminded to scan a list of quarantined emails, which enables them to detect any incorrectly quarantined messages. With the Known Spam/Suspected Spam classification, the user does not waste time on known spam, but only scans over the suspected spam messages.

Policy Patrol Spam Filter 5

Never miss a legitimate email again

Policy Patrol Spam Filter ships with a default anti-spam configuration that will start blocking spam within seconds after installation. You will easily configure your system at the Administrator level for immediate results.

Spam Filter Benefits

- Increase productivity
- Save bandwidth
- Offload Administrators
- Avoid security leaks
- Avoid wasted resources
- Never miss legitimate emails

Features

- User spam management
- White list & black list through web console
- Daily quarantine reports
- Known/Suspected spam classification
- Forward spam to junk mail folder
- Manage spam differently per user
- Block more spam with greylisting
- Anti spam reports
- Detailed tracking

What our customers say:

'Great product. Works better than any other SPAM filter we have tried. Clients are begging us for a SPAM solution.'

Ben Rutter – Project Coordinator, Lionfield Technology Solutions (Exton, Philadelphia)

'Easy to configure, saves time & trouble. Policy Patrol has cut down on the SPAM & junk and made productivity go up. I'm able to spend time on things I want to do, instead of "Baby-sitting" Exchange Server.'

Todd M. Munro - Network Administrator, LifeLink Tissue Bank (Tampa, Florida)

Known spam/Suspected spam

To intelligently apply resources, Policy Patrol Spam Filter pre-classifies spam as known or suspected spam. This allows you to delete known spam and concentrate only on the suspected spam. In this way, users can simply review the suspected spam in their quarantine reports or junk mail folders, instead of sifting through a daunting list of daily spam messages that can easily exceed one hundred per user, per day.

Spam quarantine reports

With the email quarantine report, users will never miss a legitimate email again. Users can quickly skim through the list of newly quarantined spam messages from within Outlook and deliver emails or white list addresses (even before the email is received).

Effective anti-spam techniques

Policy Patrol uses a multi-layered approach to detect spam, utilizing real-time DNS black lists, SURBL lists, sender and recipient verification, heuristic filtering and Bayesian filtering. Especially effective is greylisting, where Policy Patrol can reject initial emails from new senders for one minute. Legitimate emails will still get through, but spam messages will not. This is because unlike spam engines, regular mail servers resend their messages upon initial rejection. In a similar way, greylisting can also stop viruses from zombie machines, even before they have been detected by anti-virus vendors.

Quarantine, delete, or forward to junk mail folder

Policy Patrol Spam Filter can reject (i.e. not download messages that are listed on real-time black lists or do not have valid recipients), quarantine (i.e. place spam messages on hold on the server), delay, delete, add a custom header or add a tag to the subject of spam messages. Alternatively Policy Patrol can forward spam to the user's junk mail folder.

Challenge & Response

Policy Patrol Spam Filter includes an advanced anti-spam challenge/response system, allowing you to configure when a challenge/response request should be sent. For instance you can configure Policy Patrol Spam Filter to only send a challenge/response message if there is a reason to suspect spam. The sender will be able to verify the message through a website, upon which the message will automatically be delivered.

Anti-Spam Reports

Policy Patrol Spam Filter includes several anti-spam reports providing an overview of the number of spam messages received, the top spam domains, spam senders and spam receivers, DNSBL and SURBL lists results and much more. Anti-spam reports can be automatically generated and emailed to specified users.
